Robotics and the Emerging 48V Ecosystem

Ali Husain, Corporate Marketing & Strategy

Public Information

History of 48V

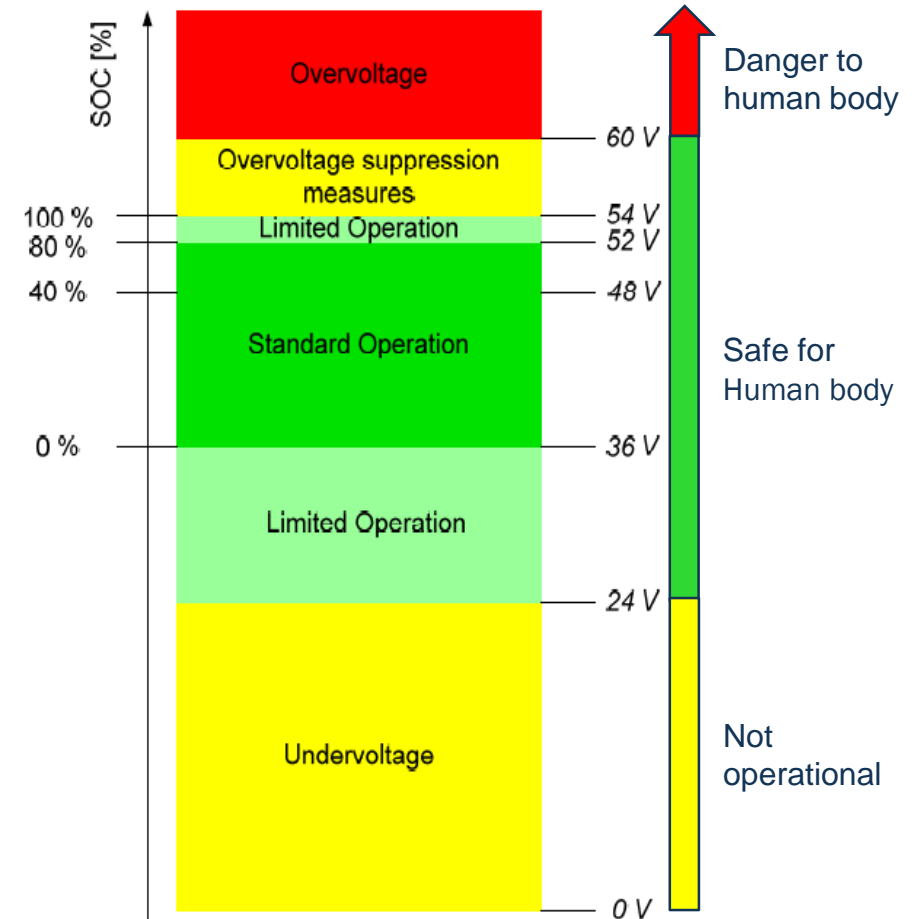

Highest “Safe Voltage”

- Minimize protections
- Minimize conductors or losses
- Often a “nominal” voltage

-48V Power

- Legacy of telephony system
- Minimizes corrosion of conductors and connections when exposed to moisture

48V System Safety Thresholds

New Applications for 48V Power Architecture

- BSG/ISG
- DC-DC Conversion
- Auxiliary Motors
- Sensing & Computing Loads

Automotive

- Server Backplane
- Cooling Fans
- Telecom Base Station

Cloud

- Factory Automation
- Collaborative Robots
- Home Robots & Automation

Robotics

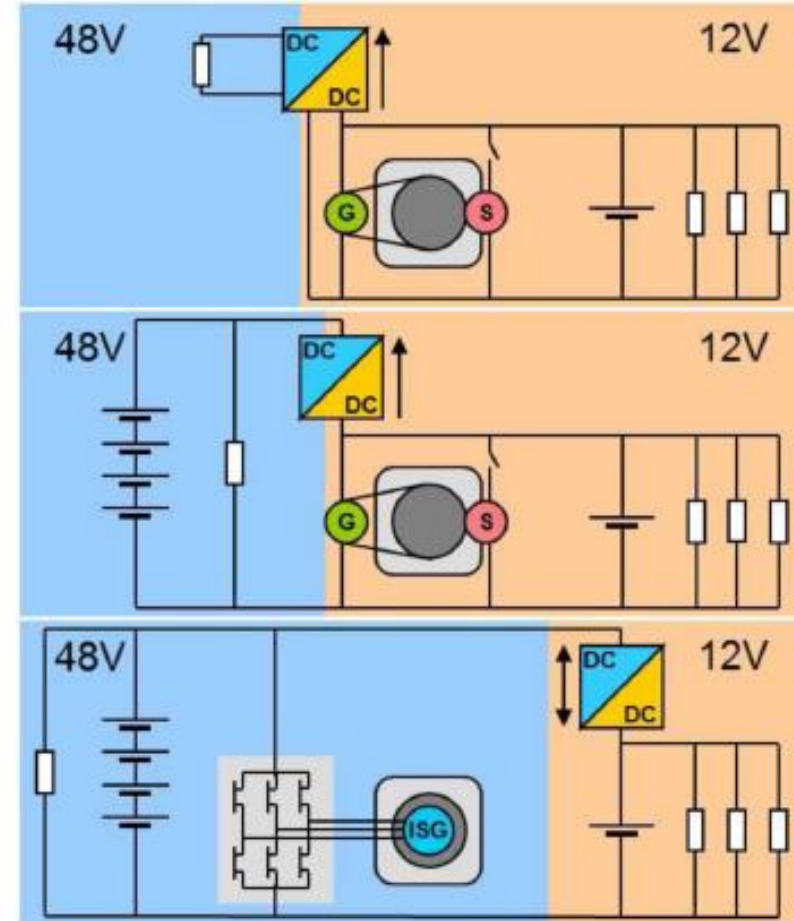

Electrification of Automobiles

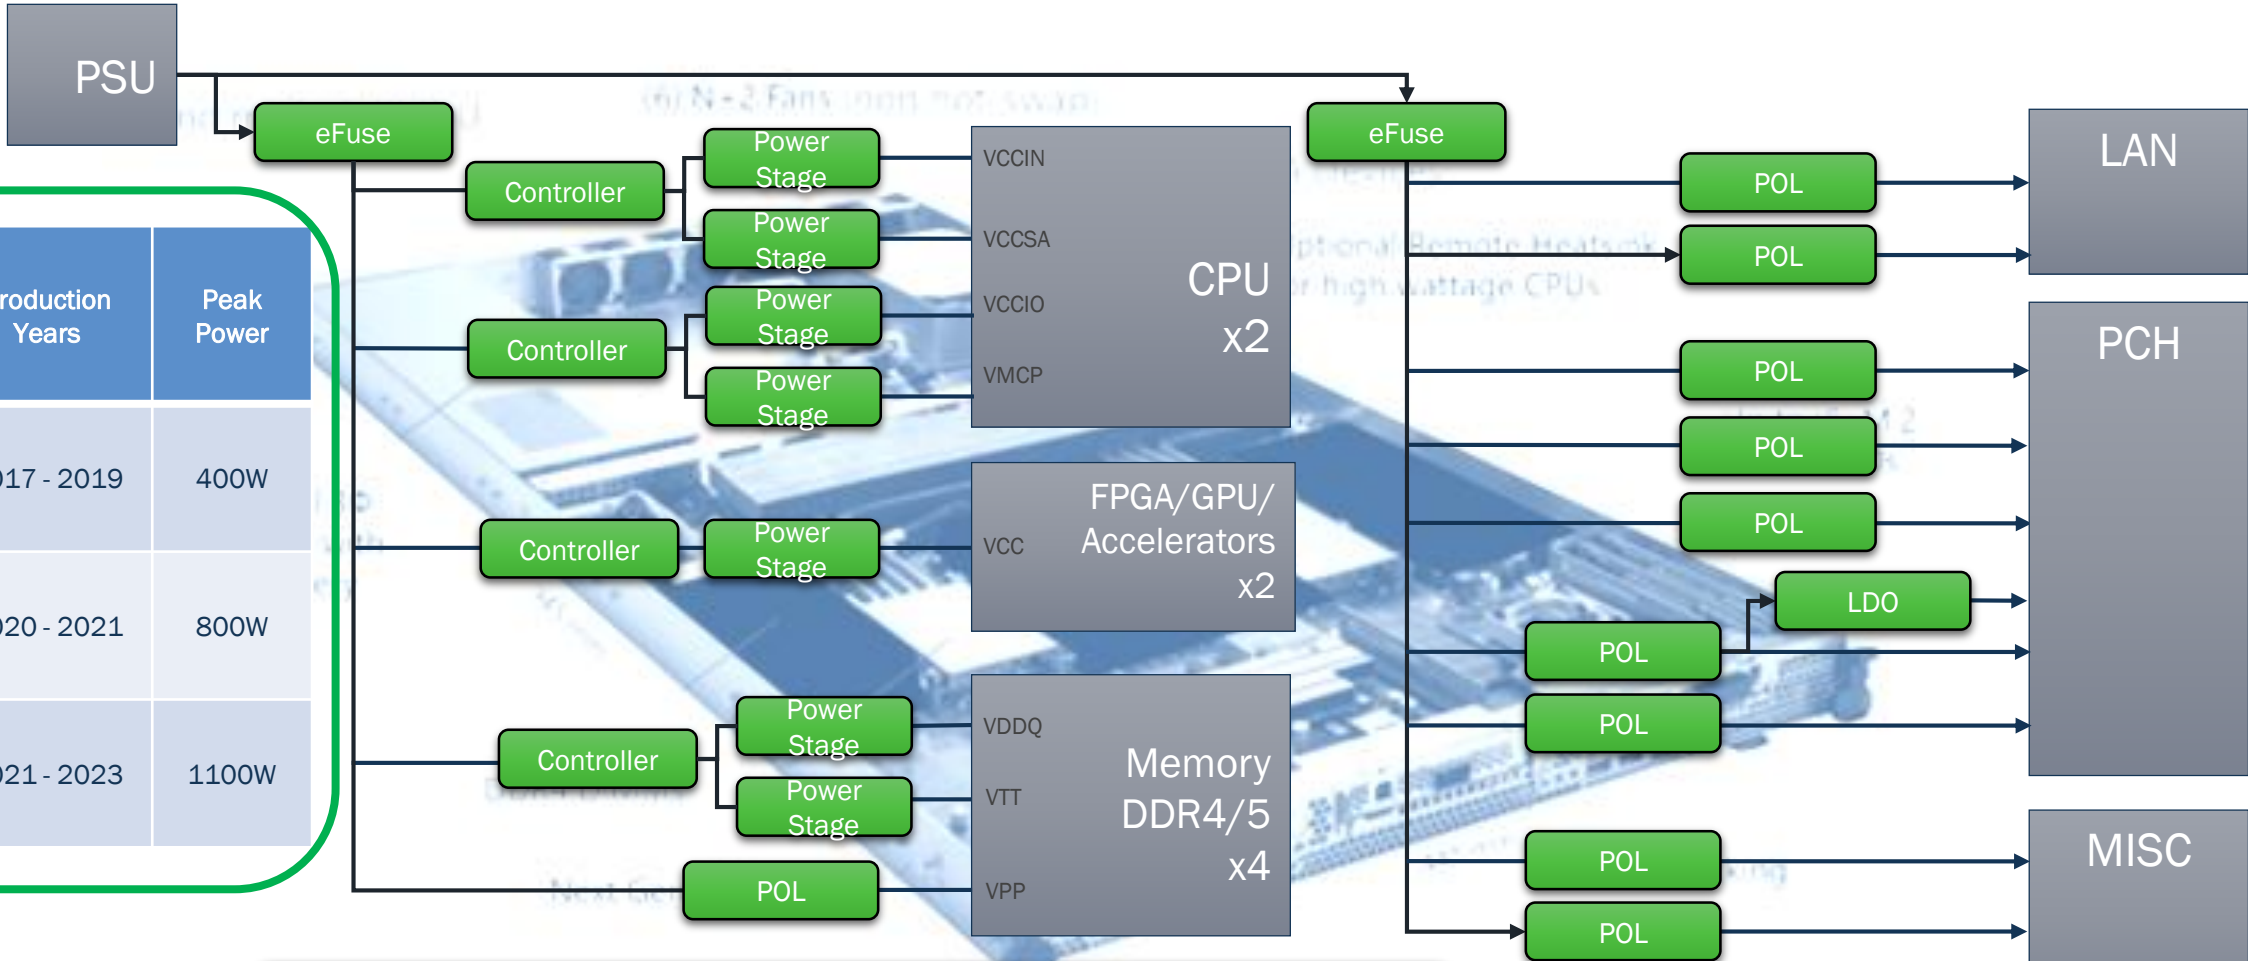

Electrified vehicles already dominate
48V bus has a function in all electrified
autos

Autonomy & Infotainment will bring
additional loads

Server Blade Block Diagram

Intel Gen	Production Years	Peak Power
VR13	2017 - 2019	400W
VR13.HC	2020 - 2021	800W
VR14	2021 - 2023	1100W

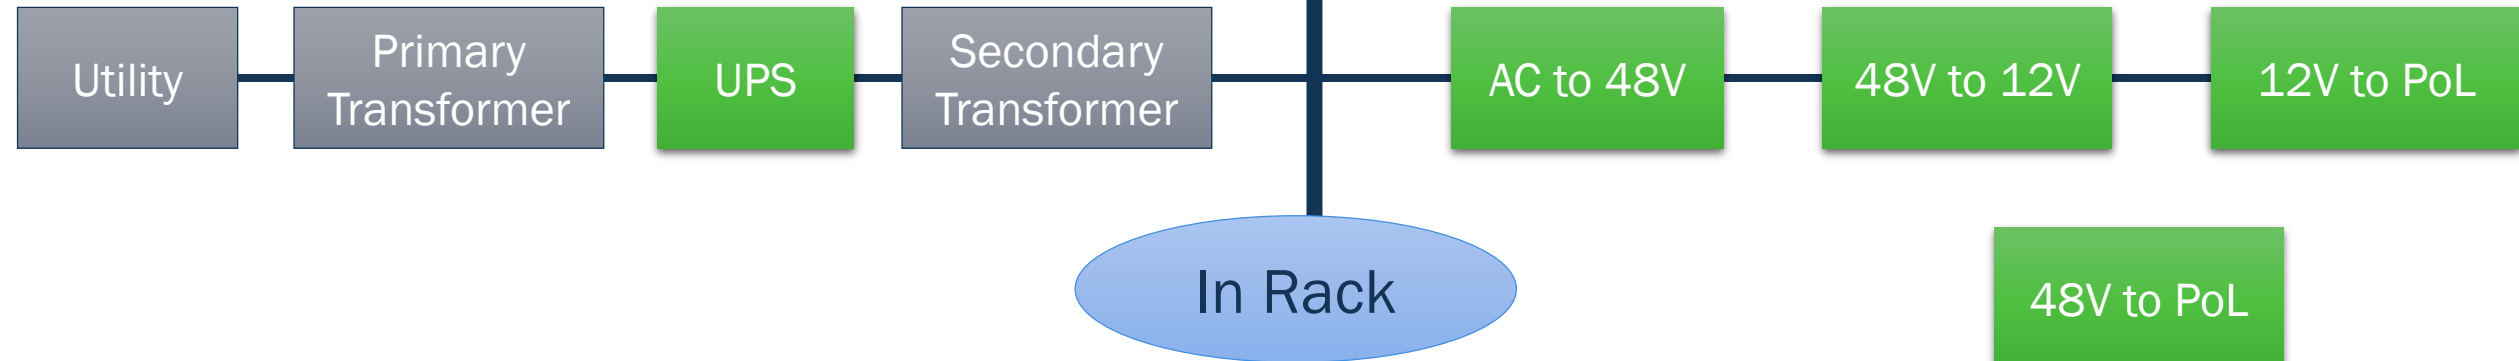

High power cores → High rack power density

Shifting Cloud Power Architecture

Traditional w/ 2 stage 48V to Load

Possible Optimized Power Path

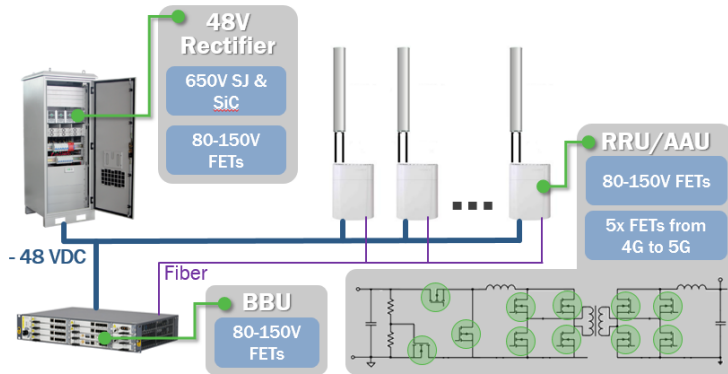

Power supply moves from blade to rack
48V gives 16x lower transmission losses

Other Applications

5G Networking Power

- Large infrastructure rollout just ramping
- 3-5x more units than 4G
- Massive MIMO has large number of radios
- Server content for software defined radio and edge computing

Power Tools:

- Battery powered devices
- Moving to 48 and 60V batteries
- Especially larger, high power machines like chainsaws and mowers.

LED Panels:

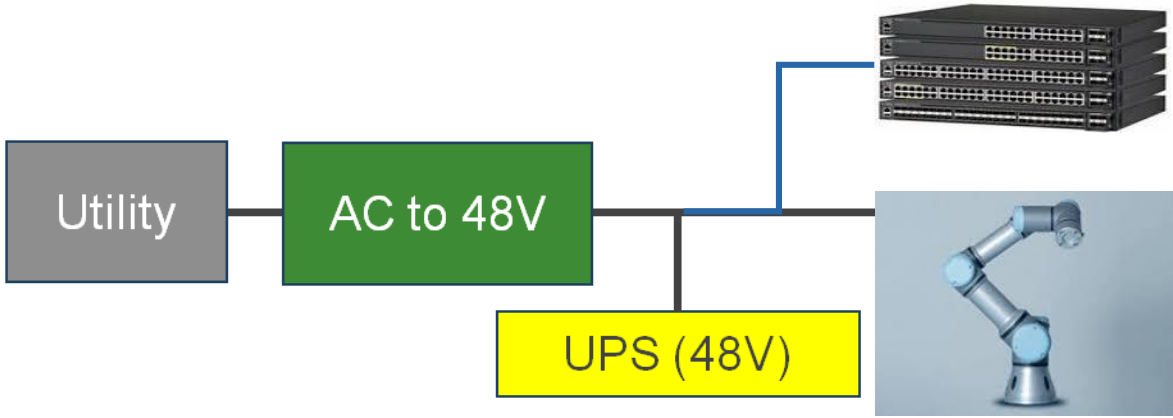

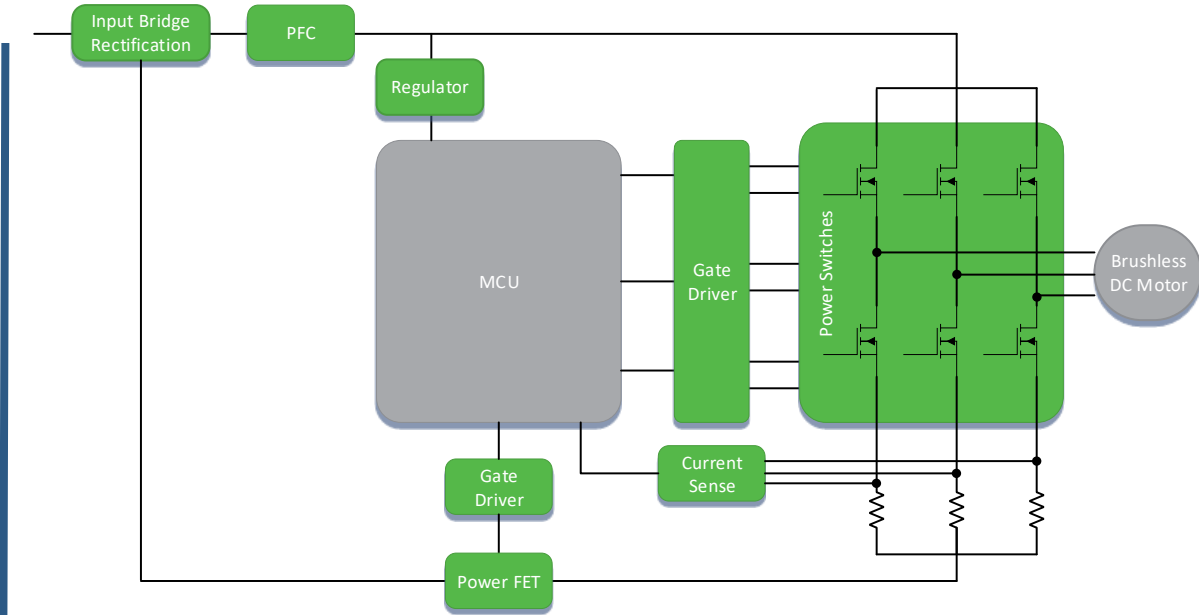

Especially for massive, outdoor displays.

- Lower Power Losses
- Thinner Panels
- Lower Weight
- Lower Thermal Stress
- Higher Reliability

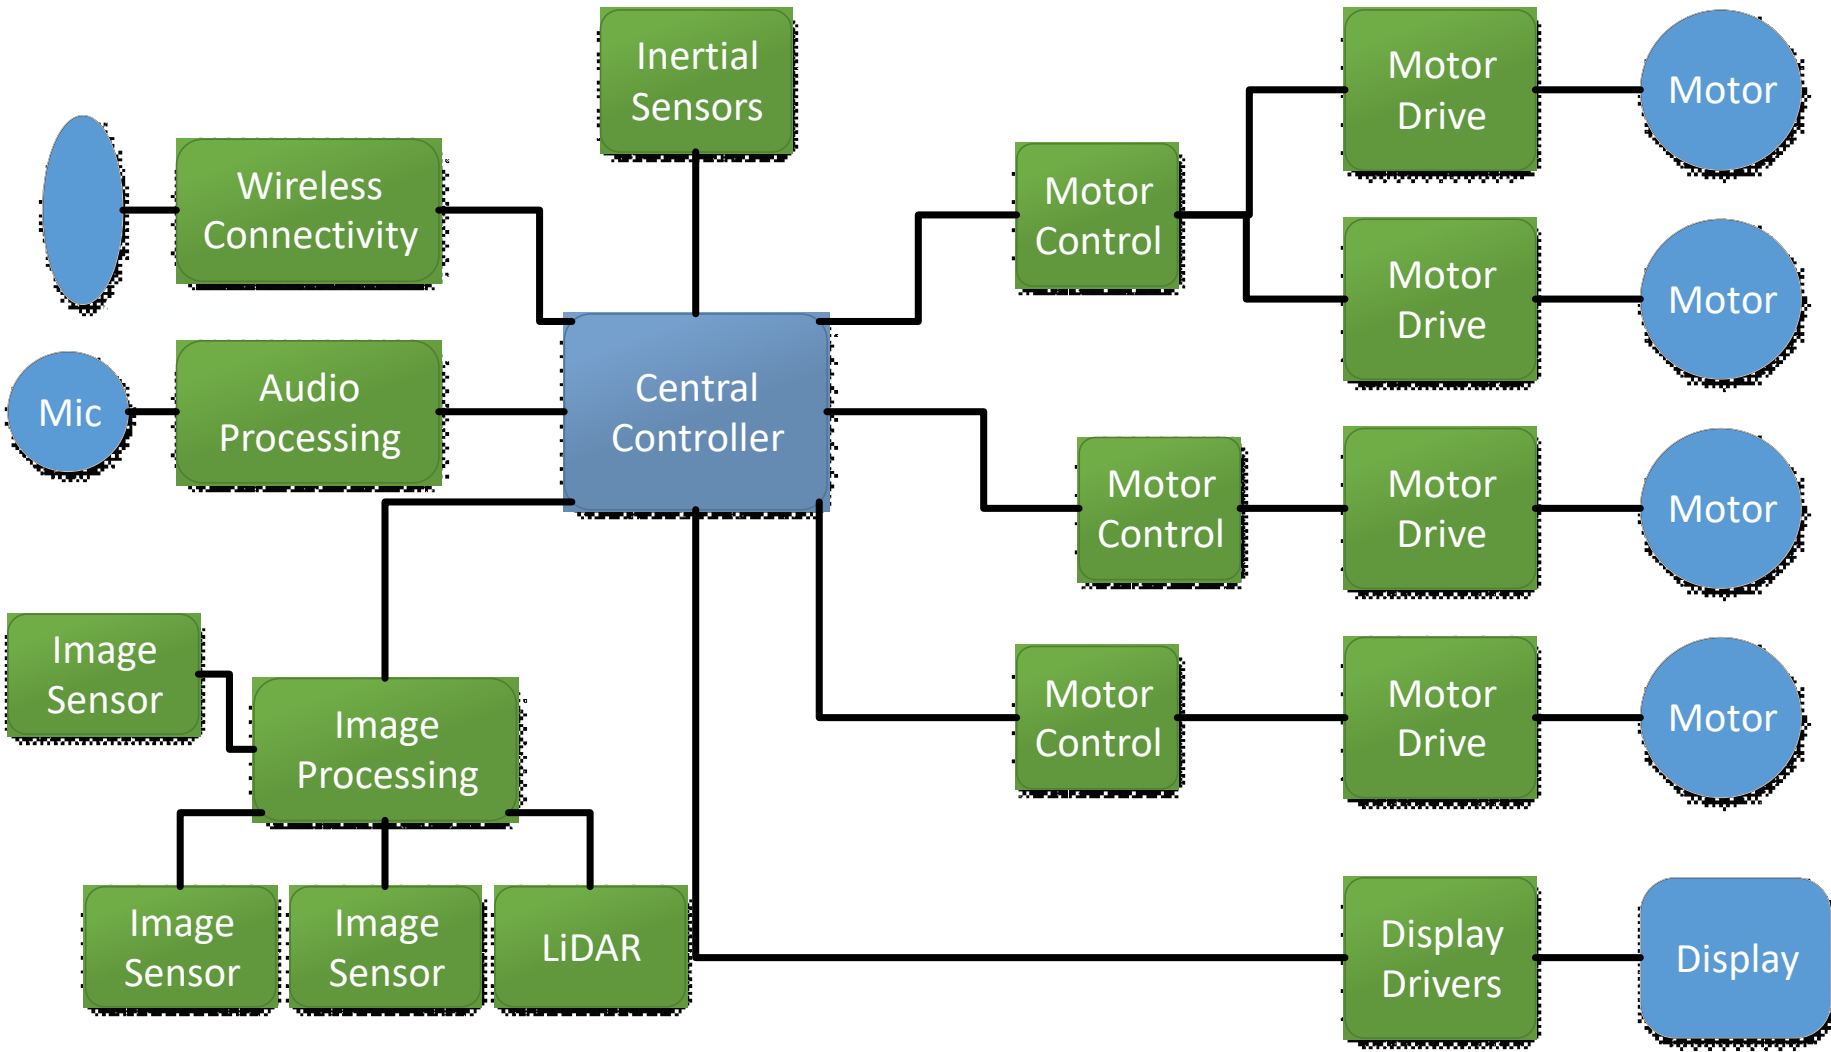

Industrial Automation

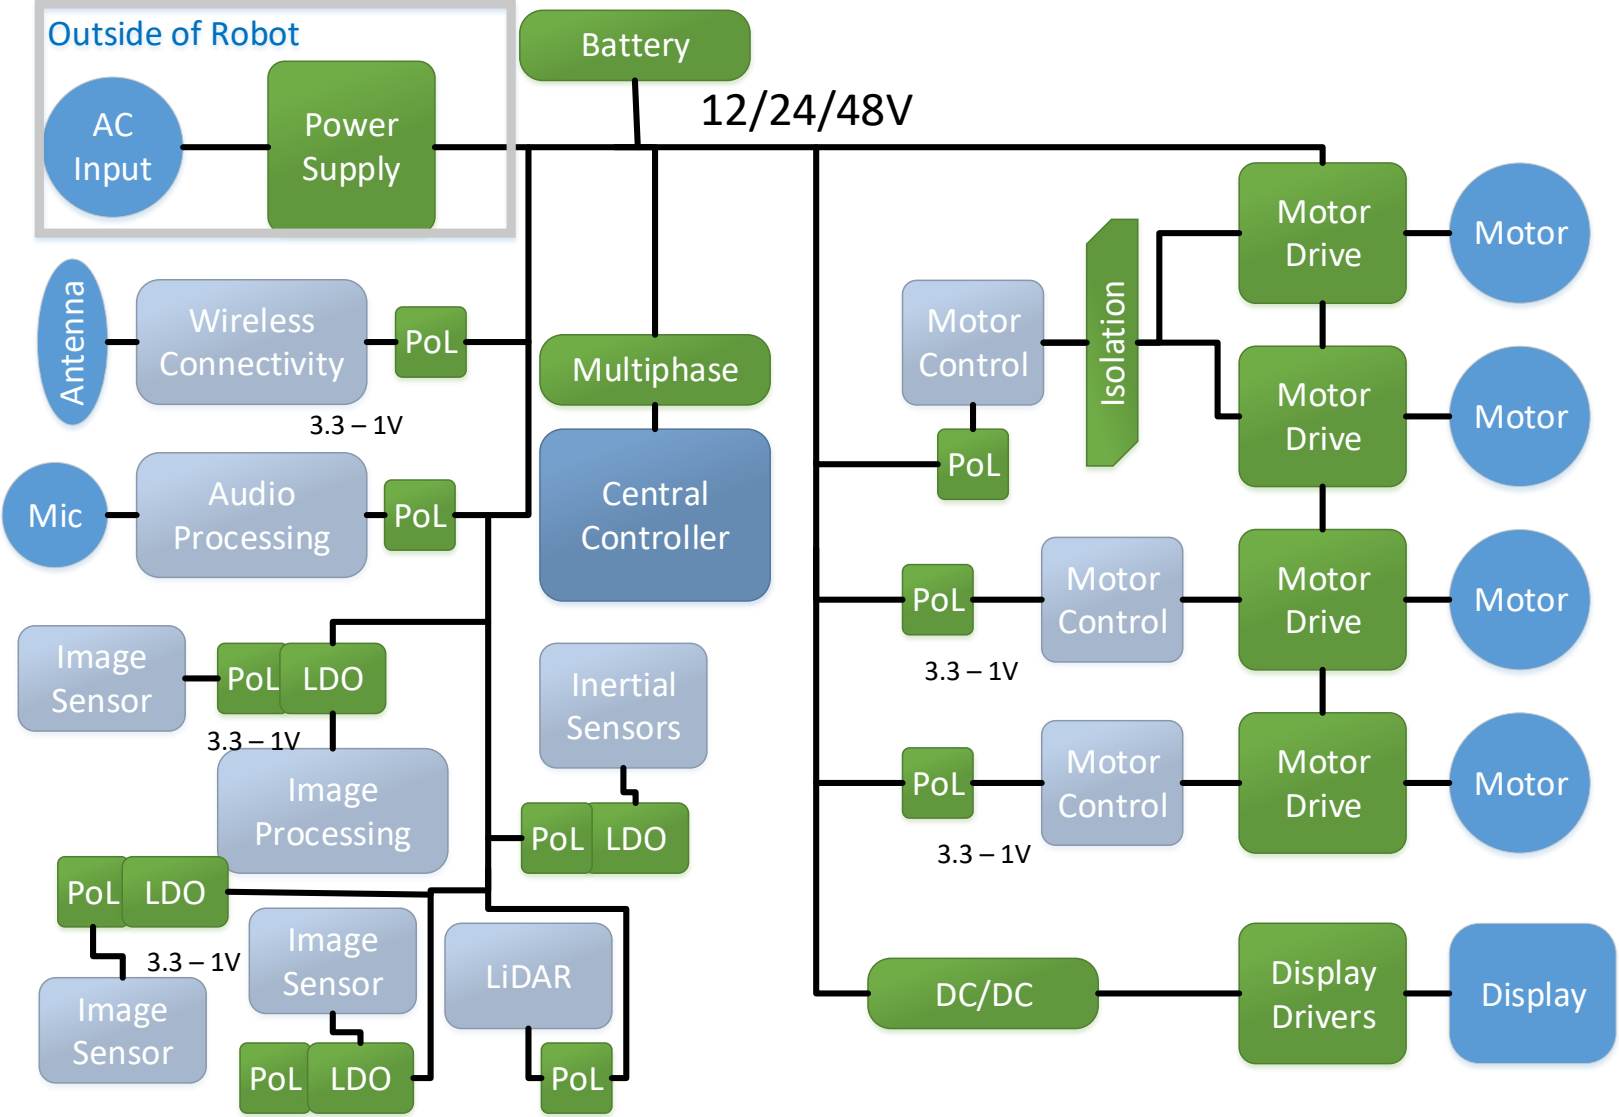

- Collaborative Robots
- Delivery
- Drones
- Care Assistants
- Toys & Companions

Robot Block Diagram

Robot Power Block Diagram

- AC/DC Conversion
- Battery Management
- DC/DC Conversion
- Multiphase Converters
- Point-of-Load (PoL)
- Linear Regulators
- Motor Drive

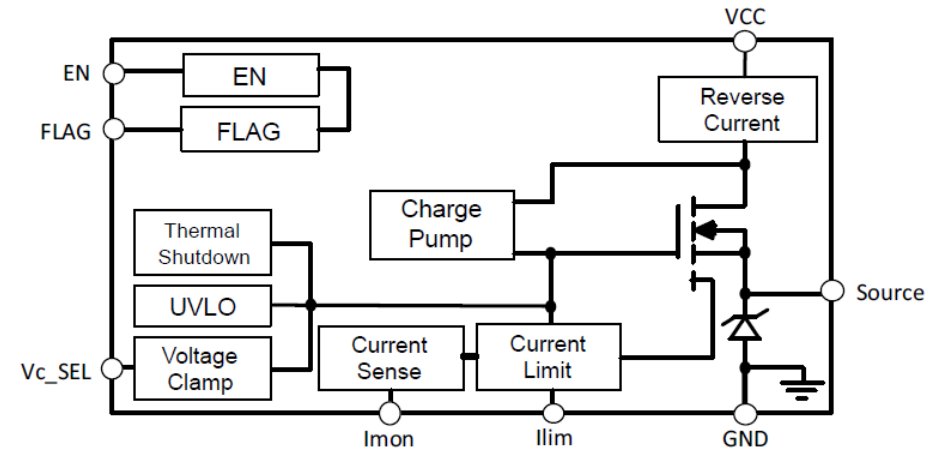

Applications and Solutions

	AC/DC	HV DC/DC	MV DC/DC	Multiphase Buck	Point-of-Load	Motor Drive	eFuse	Battery Management
Automotive	N/A	EV Battery to 48V Bus	48V to 12V	For autonomy, infotainment	Sensors, peripherals computing	BSG/ISG Turbochargers Air Conditioning	Reduce wiring, fusing	48V Battery
Cloud	Server Rack Power	DC Power Distribution?	48V to 12V	48V to core	48V to PoL	Cooling Fans	Hot Swap	In-Rack UPS
Industrial Automation	Mains to Equipment, Battery Charging	N/A	For legacy actuators at 24V, 12V	Computing	Sensors, peripherals, communications	Gripping, lifting, traction, actuation, etc	Modular Robots?	Drones, Non-stationary Robots

eFuse: Features and Functionality

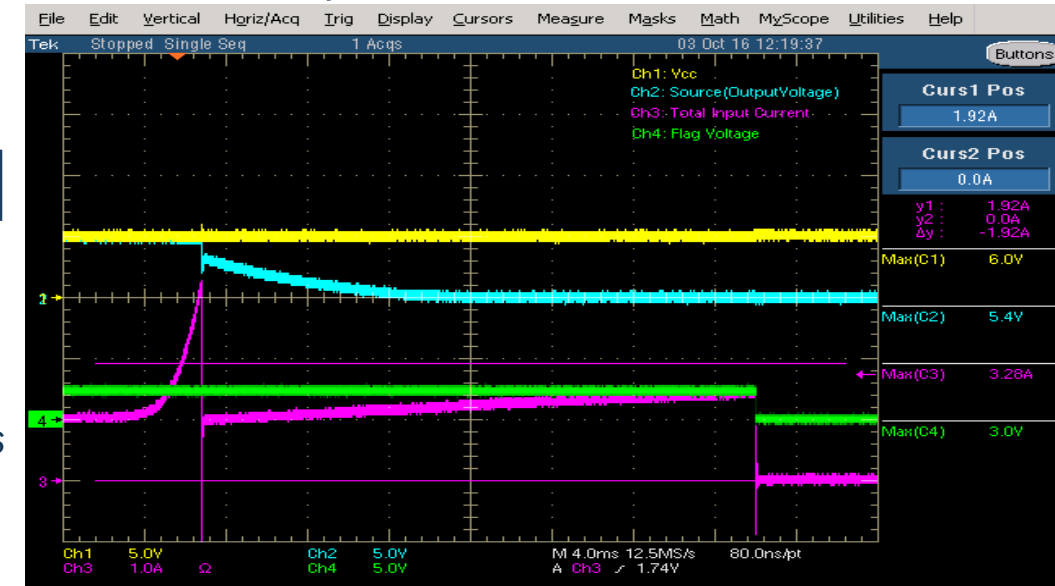

- Integrated Power Bus and System Protection
- Overvoltage
- Overcurrent protection → Level settable through external resistor
- Reverse current protection → isolation FET (isoFET)
- Adjustable output slew rate → Inrush Current Control
- Output Control (On/Off)
- Fault Report
- Resettable
- Thermal Shutdown

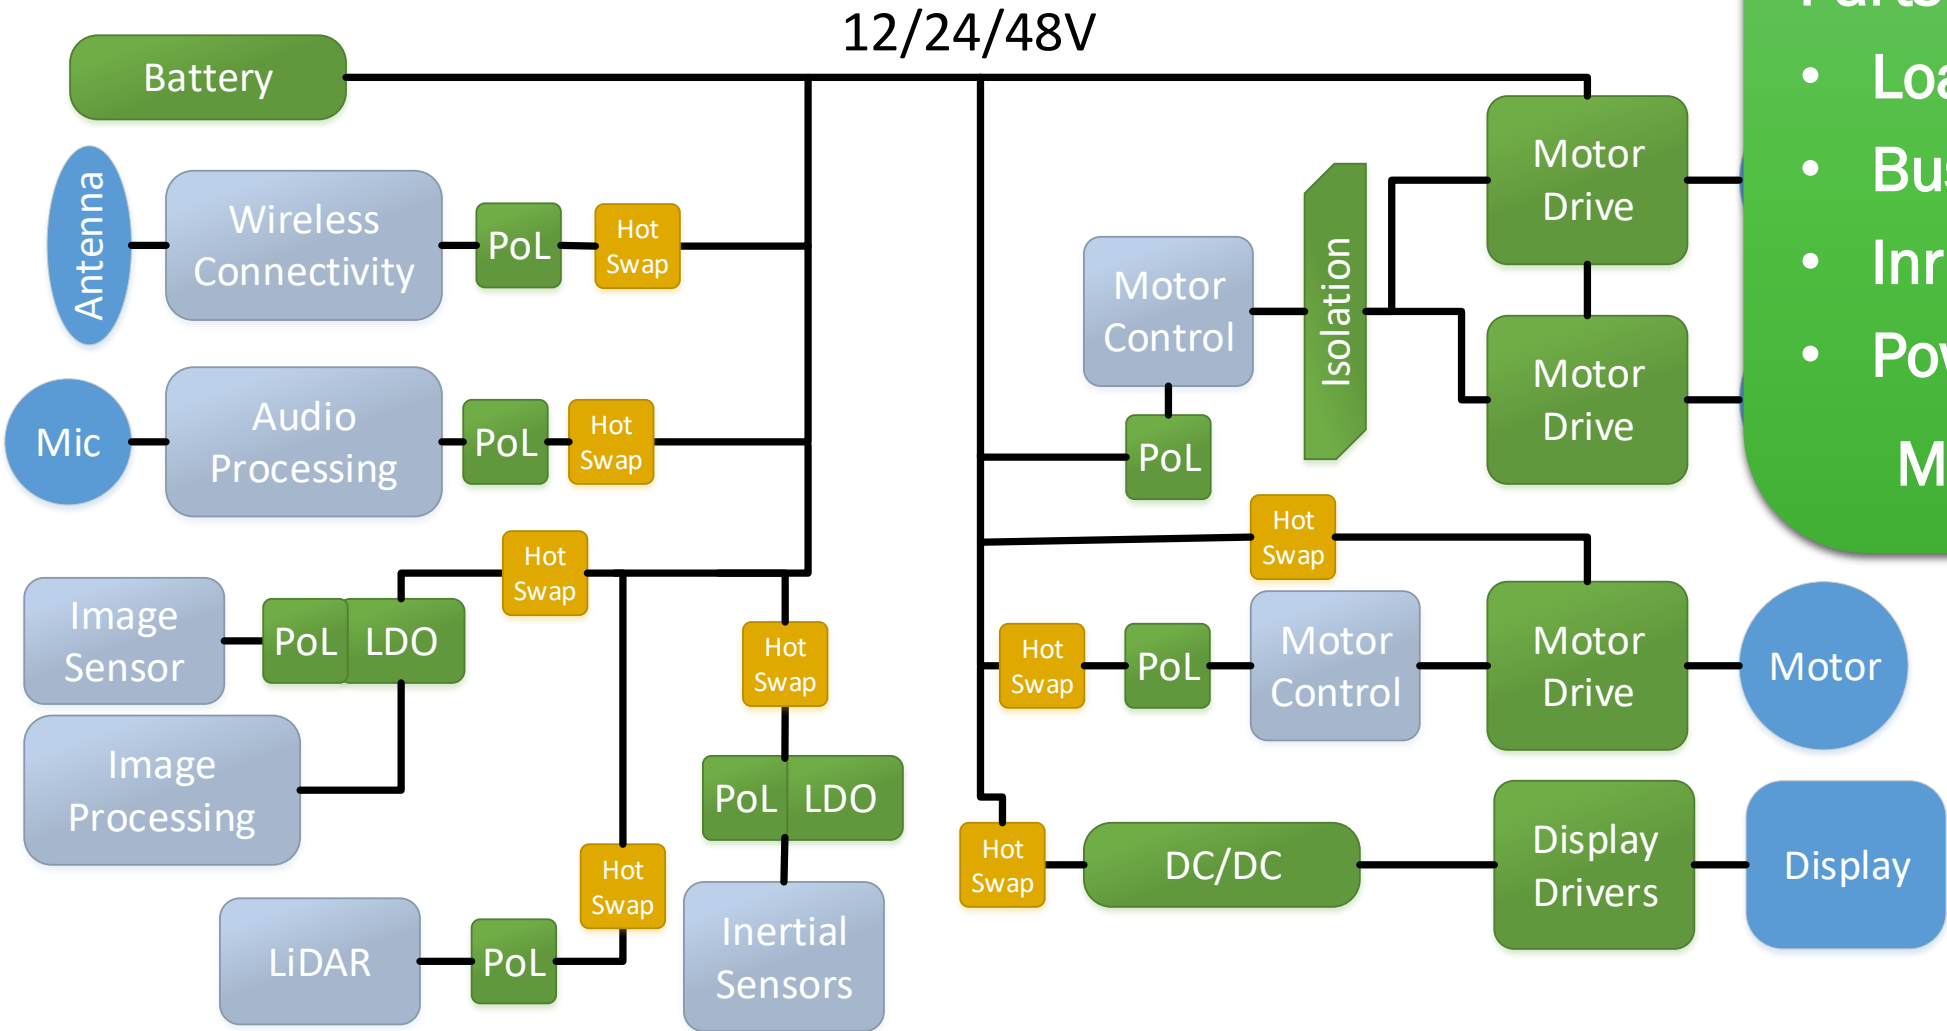

Inrush w/o eFuse

We place the FET in the saturation regime to prevent the load from being starved. Temperature sensing protects the eFuse.

Current Limit Example

Robot Power Block Diagram w/ Hotswap

Hot Swap-able Robot Parts

- Load Switch
- Bus Protection
- Inrush control
- Power Sequencing

Modular Robots!

ON Semiconductor Today

Headquarters: Phoenix, AZ

Employees: 32,000 globally

Revenue: ~\$5.9Bn⁽¹⁾

Market Capitalization: ~\$9.1Bn⁽²⁾

Ticker: ON

Founded: Spun-off from Motorola 1999, IPO 2000

- 23 Owned Manufacturing Sites
- 130+ Contract Manufacturing Sites
- Ship Nearly 80B units/yr!
- 70% Produced Internally
- Very Wide Range of Products, Processes, Packages

Human Hair 181 microns

X4DFN

Power Integrated Module

(1) Based upon 2018 results; (2) as of 4/29/19; Sector % based on 1Q19

ON Semiconductor[®]

ON Semiconductor Solutions

For 48V Applications

MV MOSFETs for all Systems

Value Proposition

Reduced EMI

Low Qrr/trr

Reduced Board space

Power Density

Reduced System Cost

MOTOR & E

A built-in centrifuge for Grid-shaped structure dust and other debris has been enlarged by 200%

- Lower conduction loss
- Lower switching loss
- Simpler gate drive
- Reduced EMI
- Reduced voltage spike
- No gate bounce
- Power Density
- Reduced Cost

PQFN8x8

Dual Cool

TOLL

D2Pak-7L

LPAK

HB Duals

Technology Development

Silicon

- ✓ Lower Rds(on)
T6, T8, PTNG
- ✓ Reduce Qrr/trr
T8, PTNG
- ✓ Lower Ciss
T8, PTNG
- ✓ Improved Qgd/Qgs
T8, PTNG
- ✓ Lower Rg
T6, T8, PTNG

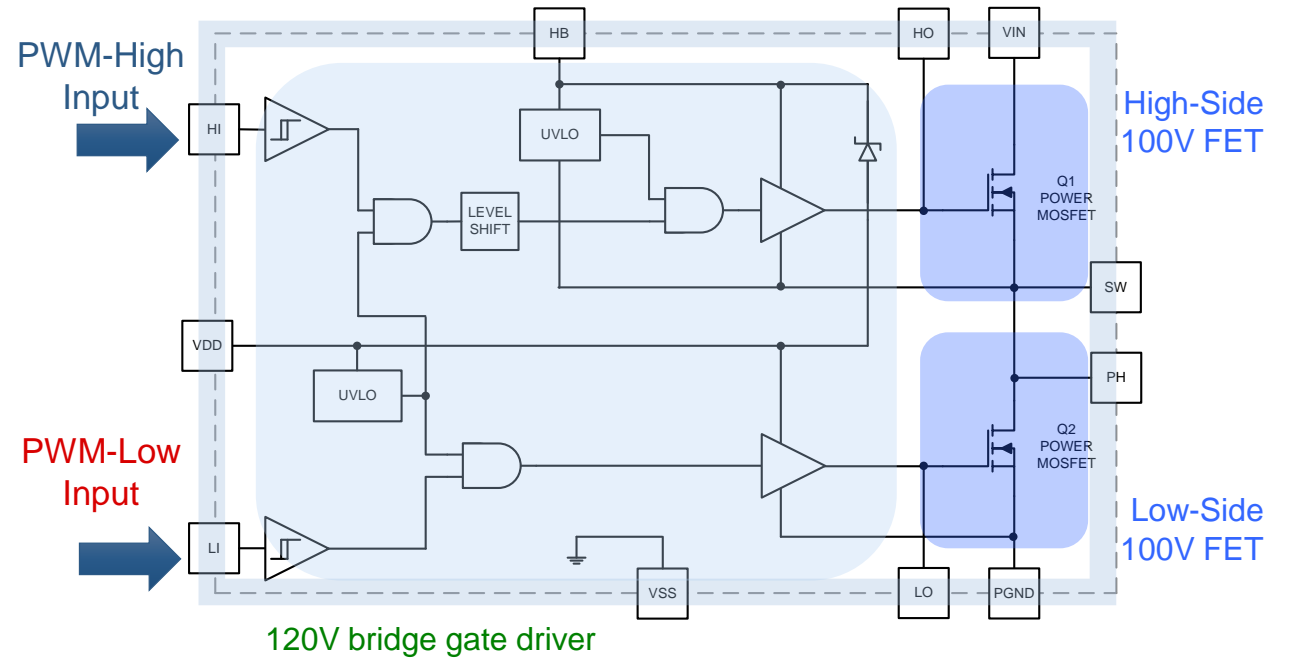

Packaging

- ✓ Improve die to package ratio
PQFN: 8x8, 5x6, 3x3
- ✓ Reduce parasitic inductance
Power Clips: 8x8, 5x6 3x3
- ✓ Improve thermal performance
Dual Cool Packaging
- ✓ Increase current capability
8x8, D2Pak7L, TOLL

FDMF8811: 100V Power Stage

Higher Density

- 6.0 mm x 7.5 mm PQFN Package
- Integrated 120V Gate Driver
- Integrated Bootstrap Diode

High Efficiency

- Ultra-Low On-Resistance 100V Power MOSFETs

High Reliability

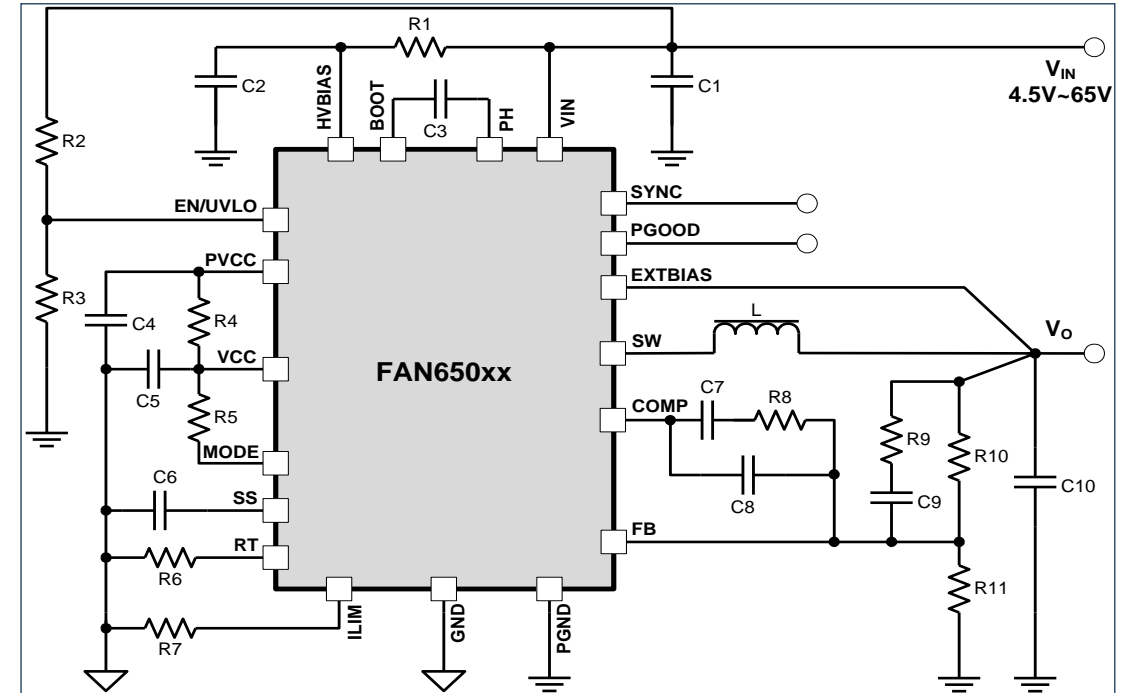

- Low Voltage stress

FAN65xxx Overview

Features

- **VIN Voltage Range**
 - Wide range: 4.5V to 65V
- **VOUT Continuous output current**
 - 6A (FAN65004B)
 - 8A (FAN65005A)
 - 10A (FAN65008B)
- **Buck Regulator**
 - Constant frequency voltage mode PWM control
 - Programmable frequency 100kHz - 1MHz
 - Frequency Synchronization with external clock
 - High Performance Error Amp for tight output regulation
 - 0.6V reference, $\pm 1.0\%$ over temp
 - DCM or PWM mode at light load condition
- **Additional Features**
 - High voltage LDO for single supply operation
 - VOUT LDO to reduce power losses
 - Adjustable Soft-start
 - Bootstrap MOSFET for low VIN
- **Protection**
 - VIN Adj. UVLO & VOUT UV & OV
 - Adjustable output current limit
 - Thermal shutdown
- **Package**
 - PQFN 6x6mm

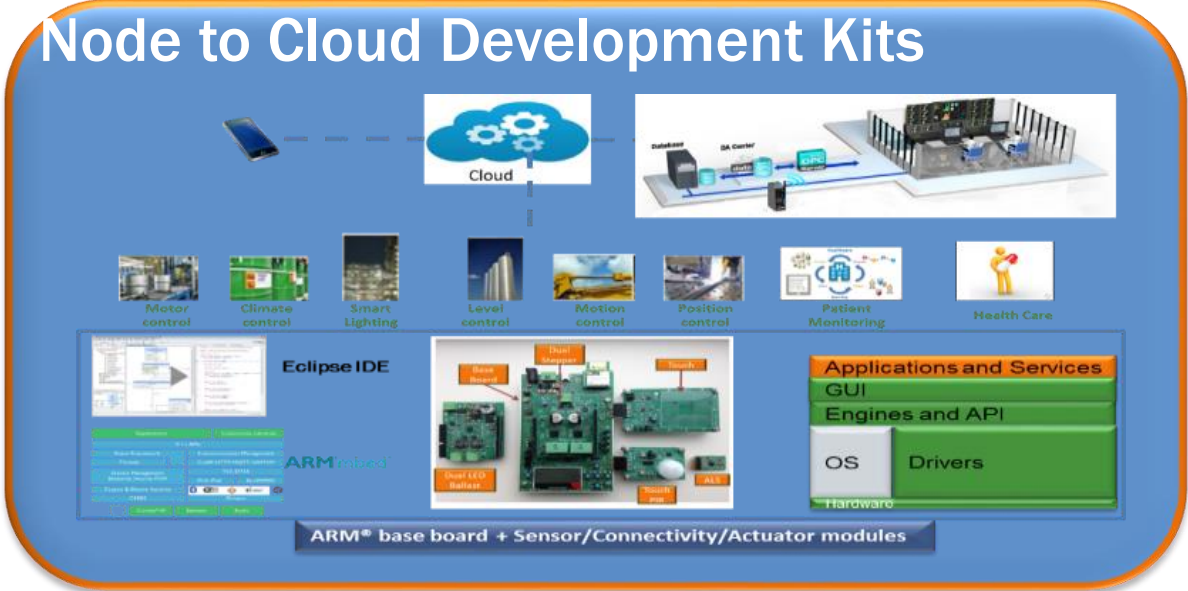

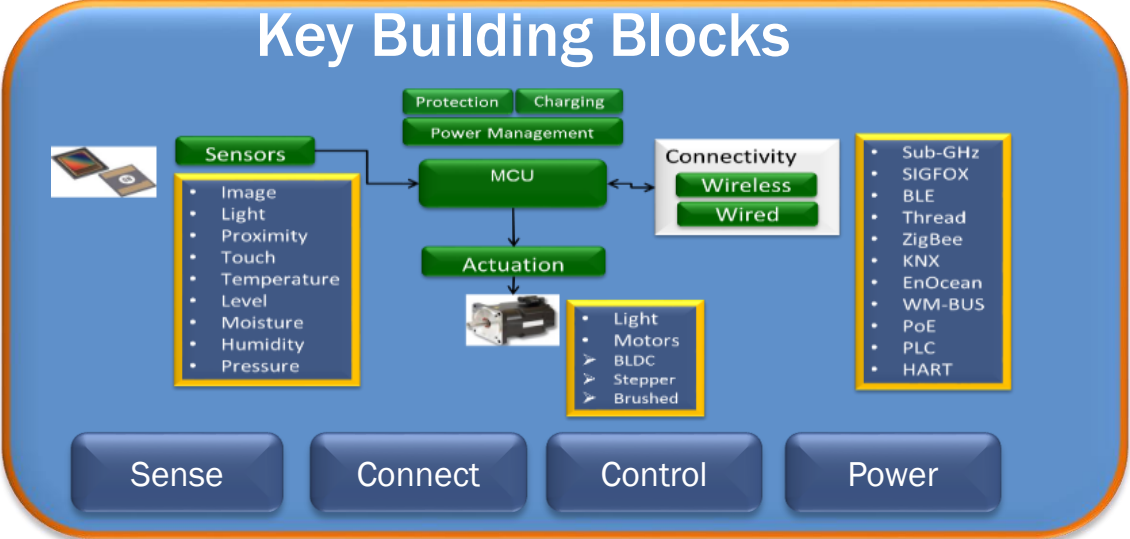

Application Diagram

Applications

- Telecom infrastructure & Baseband Boards
- Industrial automation
- DC/DC Modules
- General Purpose PoL

Enabling Connected Devices

Industry's lowest power Bluetooth® Low Energy technology

Widest Portfolio for Machine Vision

Public Information

Summary

The requirements of multiple markets will result in a diverse 48V ecosystem with improved performance and system costs.

- BSG/ISG
- DC-DC Conversion
- Auxiliary Motors
- Sensing & Computing Loads

Automotive

- Server Backplane
- Cooling Fans
- Telecom Base Station

Cloud

- Factory Automation
- Collaborative Robots
- Home Robots & Automation
