# ST Standard Products

## Experience counts

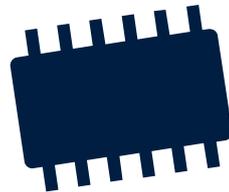

Standard products are in virtually every design and they need to be readily available with no fuss, no hurdles. ST ensures you can get what you need, the easy way and with the confidence that you have made the right choice.

We have one of the broadest ranges of industry-standard and drop-in replacements for general-purpose analog ICs, discretes and serial EEPROMs with thousands of references to help you optimize your supply base.

We manufacture them in the billions to the highest quality standards – many references are AEC-Q100 qualified for automotive applications – and you can source them through one of the largest global and local distribution partner networks or directly with us depending on your needs.

You can also find a comprehensive set of design aids including SPICE and IBIS models and simulation tools to make adding them to your design as easy as possible and help shorten your development cycle.

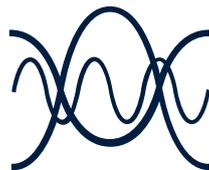

RoHS and material declaration forms are available for full environmental compliance.

# Amplifiers and Comparators

ST's Amplifier and Comparator portfolio includes a broad range of general-purpose and industry-standard, pin-to-pin replacement products.

In addition to our popular LM3 and LM29 series of low-power comparators, precision op amps with supply voltages up to 44 V, you will find our TL06/07/08 series of junction field-effect transistor (JFET) low input bias current op amps as well as our TSZ series of zero-drift, high-precision op amps.

Many references are available with automotive-grade qualification (AEC-Q100-compliant) and they all provide the highest quality and robustness.

ST op amps help enhance the signal chain and are the perfect companion to microcontrollers and analog sensors.

Here's a selection from our large portfolio of industry standard op amps and comparators.

# Interface ICs

ST offers interface ICs complying with the most popular industry-standard protocols including RS-232, RS-422, RS-423, and RS-485. They are available in a choice of transmitter/receiver configurations with data rates up to 30 Mbit/s.

To meet requirements for the harsh industrial environment, they are available in a 3 to 5.5 V operating voltage range with enhanced ESD protections (15 kV HBM, 8 kV contact discharge) and extended temperature range (-40 to 125°C).

Here's a selection from our large portfolio of industry-standard interface ICs.

## Interface ICs

# Reset and supervisor ICs

Reset and supervisor ICs are often mandatory building blocks for ensuring that electronic systems are properly monitored, especially in critical industrial applications where relying on the often available on-chip supervisory function of modern microcontrollers might not meet safety requirements. Our range comprises various functions like microprocessor supervisors, reset and voltage detectors, watchdog timers, and voltage protection ICs available in an extremely wide and granular set of monitor voltages as well as on-off controllers and smart reset ICs for consumer-oriented applications.

Here's a selection from our broad portfolio of reset and supervisor ICs.

## Reset and Supervisors

# Linear voltage regulators

ST's linear regulator portfolio provides the best answer to any clean power supply requirement. It doesn't matter which performance you are looking for, a solution is always available among our products! In addition to the well-recognized leadership and outstanding quality of our standard regulators for both positive and negative outputs, the ever-expanding high performance families address all the major trends in the modern industrial era. The world's smallest form factor package is the striking result of our continuous improvement activity as well as the unrestrained research for the best performance – be it the lowest possible dropout voltage and quiescent current or the best transient response, ripple rejection and low noise.

Here's a selection from our broad portfolio of linear voltage regulators.

## Linear Voltage Regulators

# Voltage reference

Make sure the voltage reference you are looking for is a real reference in the market! Need to design a simple wall adapter or an ultra-precise robot for non-invasive surgery?...Don't worry! ST provides you with the best solution and no compromises. Inside the ST portfolio a wide range of fixed and adjustable voltage references ranging from general-purpose highpower shunts, suitable for industrial and SMPS applications coexists with a selection of state-of-the-art high-precision and low-consumption devices, suitable for battery-powered applications or high-accuracy equipment working in sensitive environments such as automotive and avionics or laboratory instrumentation.

Here's a selection from our broad portfolio of voltage references.

## Voltage Reference

# Temperature sensors

ST's temperature sensor portfolio includes both analog and digital temperature sensor ICs

Our analog temperature sensors feature low power consumption, good linearity, and accuracy as high as  $\pm 0.5\text{ }^{\circ}\text{C}$  flat across the whole temperature operating range. Featuring power consumption as low as  $20\text{ }\mu\text{A}$  with up to 12-bit resolution able to digitize temperatures to a resolution up to  $0.0625\text{ }^{\circ}\text{C}$ , our digital temperature sensors ensure high accuracy across the entire operating range.

Additional features include an I2C/SMBus output with selectable addresses, energy-saving one-shot temperature reading, a dedicated pin for interrupt or thermostat/comparator function and programmable threshold with hysteresis.

The STTS series with its digital output (I2C and SMBUS) specifically targets computer platforms, consumer electronics as well as a variety of industrial applications

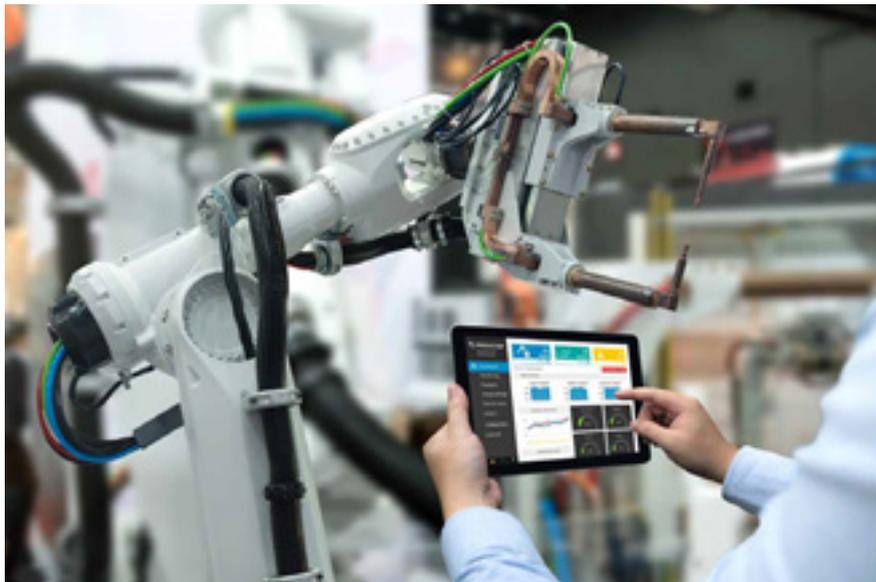

## Digital temperature sensors

# Serial EEPROM

By adopting ST's EEPROM, you benefit from the expertise and long-term commitment of the number 1 EEPROM supplier for more than 14 years (IHS Mars 2019).

ST's comprehensive portfolio offers devices from 1 Kbit up to 4 Mbits with SPI, I2C and Microwire interfaces. Products feature up to 4 million write/erase cycles per byte, over 100 million cycles per device and more than 100 years of safe data retention. Best in class performance guarantee the safest and the most flexible management for parameters, data and small code storage.

Automotive series benefits from our zero-defect approach to offer very robust, high-performance products for high-reliability applications.

ST EEPROM are available in robust mainstream SO8N, TSSOP8, DFN8 packages and in DFN5, WLCSP 8, 5 and 4 balls tiny packages.

Here's a selection of high-density devices.

# Protection devices

Electrical overstress (EOS), surge, and electrostatic discharge (ESD) protection solutions are provided in a complete portfolio offering high-volume, cost-effective, stock-shippable and pin-to-pin compatible devices.

High-current crowbar and high-efficiency clamping protection solutions provide designers with the best choice to elevate their products with the most reliable and innovative offer, including density-powered flat packages, micro-meter sized single line and high-surge/high-density protection. With our broad portfolio and the widest range of packages, ST's mission is to maintain strong leadership to help our customers pass all industry-standard requirements without any headaches.

# Rectifiers

Car LED lights need switching power supplies with rather large current for their size. Plug and power adapters for portable appliances and DC/DC point-of-load (POL) modules have the same need for compactness. The small size itself is a goal, and the consequence is a need for very small power losses as the space-consuming heatsinking is kept to a minimum. Water-resistant enclosures further limit heat sinking.

For these applications, STMicroelectronics recently developed an essential complement to the SMD range of low voltage drop, low leakage Schottky diodes. The SMA Flat, SMB Flat, PowerFlat, SOD123 and SOD123Flat devices make room for 1 to 8 A, 30 to 150

V switcher designs at a budget compatible with these applications. Datasheets which include helpful thermal impedance values and avalanche pulse curves are available for engineers to fine-tune their designs to ensure a robust finished product.

Here's a selection from our broad portfolio of diodes and rectifiers.

# SCRs and TRIACs

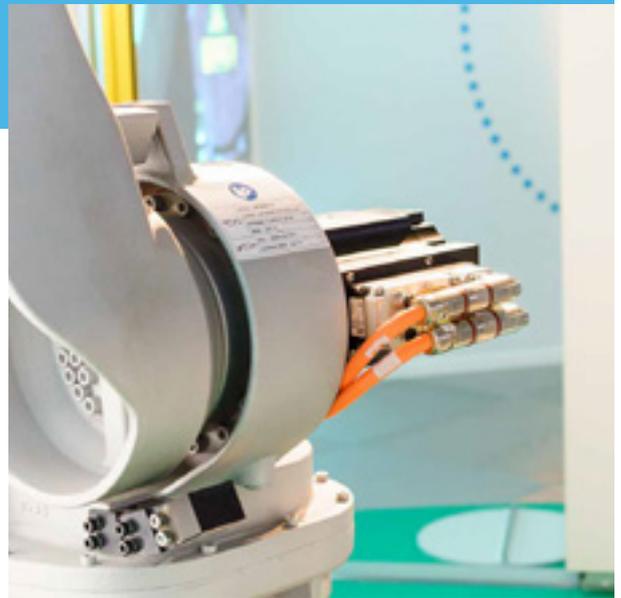

Silicon Controlled Rectifiers (SCR) or TRIACs are the best way to switch AC mains supply. The improvement of the 150°C junction temperature for ST's thyristors -SCRs and TRIACs – has a sum of benefits for applications with solid-state switches.

First of all, it gives 25°C margin gain for the power designer which allows more current to sink into the thyristors. Or the immediate effect can also be a reduced size for the heatsink and the control module. The enclosure can use less air cooling or be smaller. The D2PAK makes it even easier.

Secondly, STMicroelectronics specifies higher static and dynamic parameters at the full temperature of 150°C thanks to improved technology. Also the useful ratings at full load are specified in datasheet parametric curves ready for tightly dimensioned design. The improved turn-off capability and immunity of the 800 V 150°C device are clearly reflected and can be put to use starting with hands-on design calculations.

The results can be verified and the calculations can even be refined in the integrated interface of the AC Switch simulator thermal analysis available on ST.com.

Here's a selection from our large portfolio of thyristors, silicon-controlled rectifiers (SCRs), and TRIACs.

# Power MOSFETs

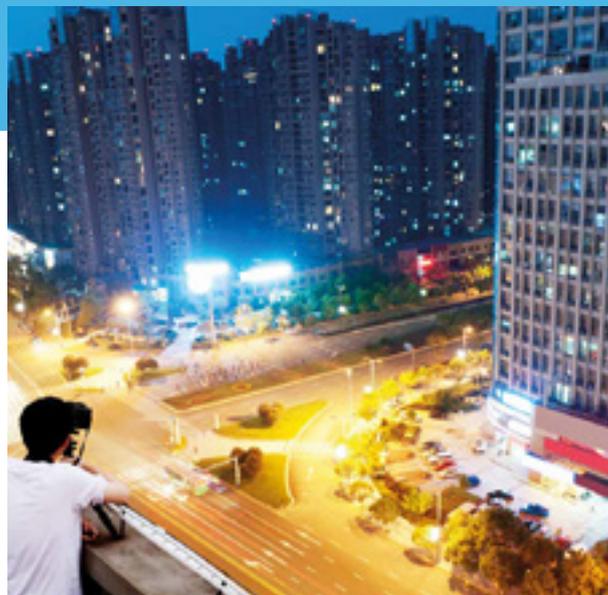

ST provides a large portfolio of standard MOSFETs with breakdown voltages up to 1000 V and  $R_{DS(on)}$  from 25 m $\Omega$  up to 8.5  $\Omega$ .

ST's standard MOSFETs help simplify the design and increase the efficiency in applications such as SMPS, monitor and TV adapters, auxiliary power suppliers, motor control, battery chargers, UPS, metering, LED drivers and HF ballasts.

Excellent ruggedness features allow reliable performance even when exposed to large voltage transients.

The product family is available in a wide range of through-hole and SMD packages.

Here's a selection from our large portfolio of standard Power MOSFETs belonging to the STPOWER family.

# Power bipolar transistors and IGBTs\*

ST provides a large portfolio of standard power bipolar transistors manufactured with planar, base-island, diffused collector and double-metal process technologies providing high current gain characteristics.

The range includes NPN and PNP Darlington transistors and bipolar junction transistors (BJTs) with high  $h_{FE}$  and low  $V_{CE(sat)}$  and  $V_{CES}$  ranging from 15 to 1500 V and  $I_C$  from 1.5 to 25 A.

The devices are available in small, thin, leadless SMD plastic package with excellent thermal behavior, ideal for general purpose as well industrial and motor control application.

We also have a range of standard IGBTs manufactured with planar (punch-through) technology, featuring negative  $V_{CE(sat)}$  coefficient and smart static vs. dynamic trade-off with increasing temperature.

Intended for general-purpose motor control applications, they are available in a wide range of packages and multiple co-packed diode options.

Here's a selection from our large portfolio of power bipolar transistors and insulated-gate bipolar transistors (IGBTs) belonging to the STPOWER family.
