To learn more about the adapter boards, please visit the link :

<http://www.st.com/indsensorsk>

Note: The included MEMS sensor adapter boards can be evaluated in stand-alone mode by simply connecting an I<sup>2</sup>C cable (except for the STEVAL-MKI186V1 IIS3DHHC where only the SPI connector is present).

For a more in-depth evaluation, you can order a motherboard based on the STM32F401VET6 microcontroller which functions as a bridge between the sensor adapter boards and a PC running our graphical user interface (GUI) or X-NUCLEO system board that is the standard ST evaluation tool.

**STEVAL-MKI109V3**

ST MEMS adapter motherboard based on the STM32F401VET6 MCU and compatible with ST MEMS sensor adapter boards

**X-NUCLEO-IKS01A2**

Motion MEMS and environmental sensor expansion board for the STM32 Nucleo (not suitable for STEVAL-MKI186V1).
